Encroachment Manager Overview

What Encroachment Manager Does:

- Reduces audit response time for owner/operators
- Reduces litigation risk
- Creates transparency with TVC records for projects
- Dramatically improves engineering team efficiency
- Facilitates inter-departmental and cross-team collaboration
- Provides options for tracking time, costs, and generating invoices for service providers and owner/operators
- Enables project managers to easily know who did what, when, how and see case notes

Encroachment Manager Benefits:

- Reduces risk
- Reduces CapEx and OpEx
- Accelerates project schedules

How Encroachment Manager Does It:

- Facilitates project oversight
- Automatically associates time entry and case notes with other data necessary to create a complete and detailed record with minimal effort
- Leverages asset data integration with the HUB^{PL} to eliminate repetitive manual input
- Shares case data in a collaborative environment across your organization
- Creates centralized repository of encroachment analyses and reports

What Encroachment Manager Includes:

- Encroachment Manager
- HUB^{PL} Navigator
- HUB^{PL} Maps
- Asset Management Database
- Crossings Workflow
- Report Builder

Manage Midstream Projects and Operations
Create TVC Records and Facilitate Inter-team Collaboration

Track Time Costs and Generate Invoices
Document what happens and when and record case notes

Improved Project Management
Accelerate project schedules and reduce risk

HUB^{PL}

Leverage HUB^{PL} Data Integration
Eliminated manual input and data duplication through HUB^{PL} Integration

Risk & Liability Mitigation
Reduce litigation and audit defense risks

Share Data via the HUB^{PL}
Exchange case histories with other tools on the HUB^{PL}

Asset Management Database
Create a centralized repository of encroachment analyses and reports
